

CONTINUOUS PENTESTING

Legion's Virtual Red Team continuous pentesting service helps leading US-based B2B eCommerce portal provider improve security posture and meet SOC-2 requirements.

AT A GLANCE

Challenges

- SOC-2 and GLBA requirements
- Always meet or exceed security commitment to clients
- Large tech environment with multiple platforms
- Need consistent security testing and controls validation

VRT Benefits

- Continuous pentesting as a service shortens dwell time of security weaknesses
- Fix-action plans are targeted and prioritized based on impact context
- Easily meet SOC-2 requirements

"The security and integrity of each client's portal is of the utmost importance to Corevist. Partnering with Legion Cyberworks to use the NodeZero platform has allowed Corevist to shift towards a more proactive approach to security. Instead of reacting to risks, Corevist is now regularly and frequently testing, prioritizing, documenting and fixing vulnerabilities to the environments before they ever become a real threat."

Justin Diana

Vice President of Engineering

OBJECTIVES

Our client runs a 24x7 B2B hosting business used by its domestic and international customers for eCommerce. They needed a way to find, fix, and verify security weaknesses are remediated on a frequent basis, and they needed to know they were targeting fix-action resources on the most critical risks. Furthermore, our client needed a solution that was going to help them meet their commitments of excellence and security to their own customers.

SOLUTIONS

Legion Cyberworks added our Virtual Red Team continuous pentesting service to the Managed SIEM, and EDR/MTR services already in place to deliver unmatched capabilities to our client.

Our Legion VRT solution is powered by NodeZero from Horizon3 and enables our team to deliver powerful algorithm based autonomous pentesting that rapidly identifies weaknesses within the environment, provides impact context and proof of exploit along with the full attack chain as evidence. The comprehensive information we now provide helps our client pinpoint what needs to be fixed to remediate weaknesses that put the business and their customers at risk.

BENEFITS

Frequent Cadence for the Find, Fix, Verify Loop

Cyber-threats, vulnerabilities, exploits, and your environment are too dynamic to rely solely on annual pentests. Our VRT Service brings you the power and flexibility of continuous pentesting.

Expertise On-Tap

Our clients gain access to our pool of experienced and talented security engineers to answer your questions and advise you along the way.

Solve Compliance & Audit Requirements

Continuous Pentesting solves your compliance requirements and we deliver rich reporting and fix-action guidance.

Focus on What Matters Most

Vulnerable does not always mean exploitable. The Legion VRT, powered by NodeZero, ensures you are focusing on exploitable vulnerabilities that put your organization at risk.
